circuit design

1. Typical application circuit

All DC/DC converters of this series are tested according to the recommended test circuit (Figure 3) before leaving the factory.

If it is required to further reduce the input and output ripple, the input and output external capacitors C_{in} and C_{out} can be increased or a capacitor with a small series equivalent impedance value can be selected. but the capacitance cannot be greater than the maximum capacitive load of the product.

V_{in}	12V
C_{in}	100uF
C_{out}	10uF
